Subject: NCI Bid Board Posting – service the Riedlab GenASIs High Throughput

Among the defining concepts of the Genetics Branch is one that underlies its basic research focus and others that form the foundation of its clinical and translational research activities. The concept that underlies basic research is that cancer is a genetic disease caused by genetic instability. That instability is a function of all the inherited and acquired effects that mediate plasticity and alterability at the level of DNA. The success of molecular genetics over the past two decades has been the identification of genes involved in pathways of growth and development, and the identification of the mechanisms by which the normal regulation and/or products of these genes are altered in cancer. The elucidation of the necessary and sufficient factors that govern genetic instability, the description of the common and disparate themes among different types of instability, and the cataloging of distinct patterns of gene expression in tumors compared to the normal tissues from which they arise are within the purview and distinct perspective of this branch. There is, in addition, a clinical/translational mantle that this branch is called upon to shoulder.

The purpose of this acquisition is to service the Riedlab GenASIs High Throughput. The support services plan provides the optimum mix of service features to prevent instrument downtime and deliver the fastest response when on-site services are required. With full maintenance and repair coverage, optional compliance services, and the predictive support of Remote Advisor technology, the plan is the ideal coverage to protect the throughput and productivity of our high-availability lab. The support services includes the following:
Priority response to assure the fastest possible resolution of service request.
Unlimited on-site repair visits to restore system to operating condition.
Parts required for repaired are fully covered.
Consumables and supplies required for repair are additionally included when needed for repair.
