Subject: NCI Bid Board Posting - Identify biomarker signatures in the Liver Chip model for different doses of radiation and time points for Radiation Biology Branch.

The Radiation Biology Branch analyzed mRNA and lncRNA expression profiles in mouse organ tissue after whole body irradiation in C57BL mouse to find biomarkers for radiation biodosimetry. Statistical analysis of the RNA profiles from the previous data from animal model and comparing the animal model data to the current liver on a chip model by Gryphon Scientific will help for the assay development using RNA biomarkers by using decision tree approach. These can eventually be developed as mitigators for radiation induced side-effects on normal tissue encountered while treating cancer radiotherapy patients.

This is not a request for competitive quotation. However, if any interested party believes it can meet the attached requirements, it may submit a statement of capabilities. The capability statement must be in writing and must contain information and material in sufficient detail to allow NCI to determine if the party can fully meet this requirement. The capability statement must be received in the contracting office by 11:30 AM on April 29th 2021 ET. A determination by the Government not to compete this requirement based upon responses to this notice is solely within the discretion of the Government. Information received will be considered solely for the purpose of determining whether to conduct a competitive procurement

Sole Source Justification:

Gryphon Scientific is the only supplier with ALL these needed areas of expertise and experience. Gryphon has personnel who are experienced in manipulating large data sets. Gryphon has years of experience in analyzing biomedical data sets that are MORE complex than the dataset in this project. Moreover, experience programming in the open source platform “R” to clean data and develop classifier models.

STATEMENT OF WORK (SOW)

1.0 TITLE

Identify biomarker signatures in the Liver Chip model for different doses of radiation and time points

2.0 BACKGROUND

We will use the sets of mRNA data to identify relevant signals for classification between radiation-injury responses. We will examine the in vitro experimental data to understand signals important to identifying radiation injury in the organ chip model. This analysis will involve the development of an optimal model to distinguish between doses. This work will involve data cleaning, feature selection of relevant signals by using wrapper and filter algorithms, and classification model development using several methods. These methods could include elastic net regression, random decision forests, support vector machines, and fused support vector machines.

2.1 OBJECTIVE

The objective is identifying liver tissue specific biomarkers by assessing functional mRNAs and lncRNAs to assess radiation exposure after mass-casualty incidents could provide a valuable tool in developing and implementing effective and timely medical countermeasures.

3.0 SCOPE

1. Gryphon will use the sets of sequencing data to identify differentially expressed longnon-coding RNAs between three radiation-injury responses: 1 Gy, 4 Gy, and 10Gy doses.
2. This analysis will involve the development of linear models to evaluate differential expression between the different dose groups over different times points (6-hour, 24 hour, 7 day) using data from multiple biological replicates
3. This work will involve cleaning and normalizing either the FPKM or read count data. If read counts are not available, the FPKM values will be log transformed and then a standard linear modeling approach to evaluate differential expression will be used with time and dose as the batch and treatment variables, respectively.
4. Radiation Oncology Branch representative will provide raw data files from sequencing experiment for the analysis

4.0. CONTRACT REQUIREMENTS/ AND PERSONNEL QUALIFICATIONS

The Contractor shall provide our laboratory with data cleaning services, and sophisticated data analysis services, including classifier development and population of our decision tree. Gryphon staff bring an unusual depth of expertise in the physical and life sciences. Their basic science perspective is complemented by skills in qualitative and quantitative analytics as well as strong communication and research management skills.

The Contractor shall perform the following tasks:

- Data normalization

STATEMENT OF WORK (SOW)

- standard linear modeling approach to evaluate differential expression with time and dose as the batch and treatment variables, respectively.
- Gene expression evaluation for developing gene signature

3.1 Project Management Plan

The data files will be transferred within one week after the approval of the purchase. The length of the analysis process and discussions should be approximately 4 weeks; this will lead to the acceptance of the analysis criteria by the Project coordinator, Dr. Molykutty J Aryankalayil, Radiation Oncology Branch, NCI, NIH. E-mail: - aryankalayilm@mail.nih.gov
Phone: -240 858 3002.

4.0 TYPE OF ORDER

This is a Firm fixed price purchase order

5.0 PERIOD OF PERFORMANCE

The period of performance shall be within 4 months from time of award.

Data analysis will start as soon the data files are transferred to the contractor.

The final product is expected to reach the researcher within 30 days after the contractor receives the data files.

(See exceptions under II., below.) Untimely notification will be taken into account in the computation of any interest penalty owed the Contractor.
1. Vendor/Contractor: Name, Address, Point of Contact for the invoice (Name, title, telephone number, e-mail and mailing address of point of contact).
 2. Remit-to address (Name and complete mailing address to send payment).
 3. Remittance name must match exactly with name on original order/contract. If the Remittance name differs from the Legal Business Name, then both names must appear on the invoice.
 4. Invoice date.
 5. Unique invoice #s for all invoices per vendor regardless of site.
 6. NBS document number formats must be included for awards created in the NBS: Contract Number; Purchase Order Number; Task or Delivery Order Number and Source Award Number (e.g., Indefinite Delivery Contract number; General Services Administration number); or, BPA Call Number and BPA Parent Award Number.

The Contractor shall not be required to comply with the cost accounting standards or contract cost principles for this purpose. This paragraph does not give the Government any right to audit the Contractor's records. The Contractor shall not be paid for any work performed or costs incurred that reasonably could have been avoided.

(g) *Termination for cause.* The Government may terminate this contract, or any part hereof, for cause in the event of any default by the Contractor, or if the Contractor fails to comply with any contract terms and conditions, or fails to provide the Government, upon request, with adequate assurances of future performance. In the event of termination for cause, the Government shall not be liable to the Contractor for any amount for supplies or services not accepted, and the Contractor shall be liable to the Government for any and all rights and remedies provided by law. If it is determined that the Government improperly terminated this contract for default, such termination shall be deemed a termination for convenience.

(h) *Warranty.* The Contractor warrants and implies that the items delivered hereunder are merchantable and fit for use for the particular purpose described in this contract.
