Subject: NCI Bid Board Posting – Data set consisting of cancer history, cancer screening, and cancer risk factors among gender minority adults

The National Cancer Institute, Investigators in the Infections and Immunoepidemiology Branch (IIB) conducts multidisciplinary studies of carefully selected domestic and foreign populations, with the goal of clarifying the relationship of infectious agents, especially viruses, to human cancer and other conditions. The mission is to discover infectious causes of cancer, to elucidate the determinants of malignancy for established oncogenic infections, to uncover novel infection-cancer associations, and to clarify how alterations in immunity and inflammation relate to cancer risk.

In support of the NCI the PRIDE Study, the contactor shall provide a dataset from the PRIDE study in .csv or .sas format so that we can analyze and understand cancer history, screening, and health behaviors among gender minority adults. The PRIDE Study's state-of-the-art web-based research platform enables robust participant recruitment, cohort management, real-time cohort statistics, comprehensive survey administration, facile deployment of studies to cohort segments, and linkage with mHealth devices.

The National Cancer Institute plans to purchase the PRIDE Study data from Stanford University. The PRIDE Study, a national, online, prospective, longitudinal general health cohort study (launched May 2017) of over 20,000 SGM individuals that employs innovative technologies to bridge research gaps in the health of these medically underserved and vulnerable populations. This is not a request for competitive quotation. However, if any interested party believes it can meet the attached requirements, it may submit a statement of capabilities. STATEMENT OF WORK (SOW)

1.0 TITLE

Cancer history, screening, and health behaviors among gender minority adults

2.0 BACKGROUND

Cancer is an understudied topic among gender minority persons (individuals who are intersex and those whose gender identity differs from their sex assigned at birth) due to paucity of available data. Until recently, research on cancer in this population has been limited to case reports and a handful of studies. The few studies on cancer burden in transgender persons do not include non-binary gender identities. Non-binary individuals are often left out of health research as they are not often recruited in traditional epidemiologic studies and are not readily identified in medical records and administrative datasets. This dearth of high-quality research in transgender and intersex persons has resulted in a lack of national cancer screening guidelines for these patients. Therefore, there is a critical need to understand the differential risks for specific types of cancer in this population. This information can help inform screening guidelines and prevention efforts, which will become increasingly important as the population ages.

2.1 OBJECTIVE

To understand cancer history, screening, and health behaviors among gender minority adults.

3.0 SCOPE

Stanford University will provide a dataset from The PRIDE study so that we can analyze data for the stated objective above.
