Subject: NCI Bid Board Posting – Acquisition of high-quality QIAcube Connect System for replacement of the classic QIAcube for NOB lab.

The Neuro-Oncology Branch (NOB) of the CCR, NCI, is performing translational researches on brain tumors, especially on the most malignant form - glioblastoma, using biological, biochemical, pathological, and immunological methods to develop novel therapeutics for the patients with brain tumors. Dr Terri Armstrong, a senior PI of NOB, has been seeking the genomic predictors of toxicity and biologic underpinnings of critical symptoms with the goal to improve symptom management and patient outcomes. Having used the QIAGEN® spin-column technology on the QIAcube workstation, we have successfully extracted and purified nucleic acids and proteins from FFPE samples for further molecular biology studies. As the classic QIAcube has been discontinued and replaced with the new QIAcube Connect, we are requesting this second generation of robotic automated equipment QIAcube Connect for the on-going research projects.

This is not a request for competitive quotation. However, if any interested party believes it can meet the attached requirements, it may submit a statement of capabilities. The capability statement must be in writing and must contain information and material in sufficient detail to allow NCI to determine if the party can fully meet this requirement. The capability statement must be received in the contracting office by 11:30 AM on July 9, 2021 ET. A determination by the Government not to compete this requirement based upon responses to this notice is solely within the discretion of the Government. Information received will be considered solely for the purpose of determining whether to conduct a competitive procurement.

**Sole Source Justification:**

The QIAcube Connect is the next generation of the widely used QIAcube, and is redefining the benefits of automating sample processing. With advanced digital capabilities and connectivity that builds on the success of QIAcube, QIAcube Connect allows research labs to fully automate and track their well known QIAGEN spin-column extraction and purification protocols – at the push of a button. No change of purification chemistry is required, assuring fast startup and immediate results. All steps in the purification procedure are fully automated — up to 12 samples can be processed per run. The QIAcube Connect offers an augmented user interface that provides a new dimension of utility. Researchers can stay connected to their instrument through the built-in screen and also remotely with a tablet (included), containing the pre-installed QIAcube Connect App, enabling quick response times and ability to monitor runs while away from the QIAcube Connect.

### 4.0 SPECIAL ORDER REQUIREMENTS

#### 4.1 PRODUCT FEATURES/SALIENT CHARACTERISTICS

The following product features/characteristics are required for this requirement:

- 1) **Full automation from lysis to purification:** *The versatile robotic arm eliminates manual processing steps in sample lysis and nucleic acid or protein purification. It performs the fully automated sample and reagent handling in combination with the integrated heated shaker and centrifugation units.*
- 2) **Convenient connectivity features:** *Real-time run status can be monitored on the QIAcube Connect App by connecting the QIAcube Connect instrument via the Q-Base to the local network. The QIAcube Connect App enables also to do run setups on a tablet computer.*
- 3) **Ensuring traceability:** *Create run reports and restrict user access when needed for documentation and traceability demands. Spin column kit and sample information can be easily imported by scanning the kit barcode and sample ID using the integrated barcode reader.*
- 4) **High user and sample safety:** *The robotic arm contains an UV LED that allows short distance irradiation of the work deck to maximize decontamination efficiency.*
- 5) **Save limited lab space:** *The built-in centrifuge and heated shaker units can be operated independently like individual instruments, and thus the QIAcube Connect allows to reduce the number of instruments on the bench.*
- 6) **Flexible throughput options:** *QIAcube Connect allows processing of 1-12 samples per run.*

## STATEMENT OF NEED (SON)

- 7) **Load check:** *An optical sensor provides a comprehensive load check prior to sample processing by checking worktable setup and ensures correct loading of the instrument.*
