Subject: NCI Bid Board Posting – to provide service for various AKTA pure 25 L

The Laboratory of Cellular and Molecular Biology (LCMB) has a long and distinguished history in the study of signal transduction mechanisms that control normal cell growth and, when altered, lead to malignant transformation. Through the 1980s and 1990s many critical signaling molecules including growth factors, growth factor receptors and intracellular transduction molecules were first identified and characterized in the LCMB. The mission of LCMB remains focused on performing cutting-edge, world-class research in this field of biology, and important discoveries continue. LCMB Investigators focus on defining signaling components and pathways and understanding their regulation. The relationship of signaling to cellular growth and death, transcriptional regulation, mitosis, cellular differentiation and organogenesis, cell adhesion, motility and chemotaxis are more complex topics under investigation. Alterations in signaling leading to oncogenesis, unregulated growth and metastasis are also studied. In all cases the goal LCMB hopes to achieve is outstanding, innovative and high-impact science.

The National Cancer Institute (NCI), Center for Cancer Research (CCR), Laboratory Cellular and Molecular Biology has 3 groups conducting research that heavily use these FPLC systems. The Randazzo lab studies Arf GAPs related to tumor invasion. The principle aim of these studies is to determine catalytic differences between Arf GAPs that have been implicated in cancer and those that have constitutive activities in cells, with the goal of developing therapeutics specific for the Arf GAPs that drive invasion and metastasis. Larry Samelson's lab does cutting edge work on the function of LAT in T-cells and isolation of adaptors that attach to the LAT molecule. This work is highly dependent on purifying proteins using chromatography instruments as both recombinant and endogenous proteins are purified from a variety of sources using state of the art chromatography materials. All methods have been developed over the past 15 years using equipment and supplies available through GE-Healthcare. Failure of one FPLC can result in loss of expensive reagents and delays of weeks for individuals' experiments. The instruments have complex with multiple digital electronic components as well as motors and moving parts with limited lifetimes due to use. For the instruments to be available for continued use, regular maintenance is absolutely necessary as is immediately available repair services. The most cost-effective way to guarantee high performance of the instrument is to purchase a maintenance agreement contract that will take care of services as well as any necessary repairs associated with the instrument.

The National Cancer Institute plans to purchase service contract with Cytiva Global Life Sciences to perform this work. This is not a request for competitive quotation. However, if any interested party believes it can meet the attached requirements, it may submit a statement of capabilities. The capability statement must be in writing and must contain information and material in sufficient detail to allow NCI to determine if the party can fully meet this requirement. The capability statement must be received in the contracting office by 11:30 AM on May 7, 2022 ET. A determination by the Government not to compete this requirement based upon responses to this notice is solely within the discretion of the Government. Information received will be considered solely for the purpose of determining whether to conduct a competitive procurement.

Sole Source Justification:

Cytiva Global Life Science is the only known source to maintain the instruments listed above with a secure yearly maintenance agreement. GE Healthcare is the manufacturer of the instruments and the parts needed for repair. The machines have a proprietary software to help diagnose and guide technicians in the repair of the instrument. Only GE service technicians have access to this software. In the past GE has repaired our AKTA purifiers in a timely manner. There are no other qualified sources that can provide the necessary technical expertise and access to parts for repair that allow us to continue the on-going experiments within the LCMB.
