Subject: NCI Bid Board Posting – Identify biomarker signatures using non-coding RNAs in the Lung Chip model for different doses of radiation and time points

The National Cancer Institute (NCI), the Radiation Biology Branch research activities are focused on pre-clinical basic science research aimed at identifying and incorporating novel approaches to cancer treatment, evaluation, and prevention. A variety of approaches are evaluated at the molecular, biochemical, cellular, and physiological levels including the impact of the tumor microenvironment and metabolic mutations to improve cancer treatment. Intentional or accidental exposure of humans to ionizing radiation or a course of definitive radiation therapy can lead to cancer induction or second malignancies. Research studies are directed to identify interventions to delay or prevent radiation-induced cancer after the exposure has occurred. Emphasis is placed on gaining a better understanding of the mechanisms of cell killing and protection and the activation/inhibition of complex signaling pathways mediated by oxidative stress, including ionizing radiation, reactive oxygen species (ROS), and reactive nitrogen species (RNS).

The primary objective is identifying liver tissue specific biomarkers by assessing functional mRNAs and lncRNAs to assess radiation exposure after mass-casualty incidents could provide a valuable tool in developing and implementing effective and timely medical countermeasures.

The National Cancer Institute plans to purchase sets of mRNA, lncRNA and microRNA data sets to identify relevant signals for classification between radiation-injury responses from Gryphon Scientific, LLC. This is not a request for competitive quotation. However, if any interested party believes it can meet the attached requirements, it may submit a statement of capabilities. The capability statement must be in writing and must contain information and material in sufficient detail to allow NCI to determine if the party can fully meet this requirement. The capability statement must be received in the contracting office by 11:30 AM on May 19, 2022. ET. A determination by the Government not to compete this requirement based upon responses to this notice is solely within the discretion of the Government. Information received will be considered solely for the purpose of determining whether to conduct a competitive procurement.

**Sole Source Justification:**

There are no known sources that meet the Gryphon Scientific's expertise to do the analysis which is appropriate for the signature development using RNA biomarkers. . Jonathan Pinney, Gryphon Scientific of Gryphon has years of experience in working with microarray data sets for cancer research, and ALSO has programming experience. Dr. Rocco Casagrande of Gryphon has more than a decade experience working on modeling the effects of nuclear weapons and in fact developed the computational model that supported new triage algorithms for radiation injuries arising from nuclear attacks Also, there are certainly NO small businesses with this blend of experience and expertise to perform the analysis which is appropriate for the signature development using our decision tree approach. No other vendors contacted could supply our specific and unique needs.

## STATEMENT OF WORK (SOW)

### 1.0 TITLE

Identify biomarker signatures using non-coding RNAs in the Lung Chip model for different doses of radiation and time points

### 2.0 BACKGROUND

We will use the sets of mRNA, lncRNA and microRNA data sets to identify relevant signals for classification between radiation-injury responses. We will examine the in vitro experimental data to understand signals important to identifying radiation injury in the organ chip model. This analysis will involve the development of an optimal model to distinguish between doses. This work will involve data cleaning, feature selection of relevant signals by using wrapper and filter algorithms, and classification model development using several methods. These methods could include elastic net regression, random decision forests, support vector machines, and fused support vector machines.

#### 2.1 OBJECTIVE

*The objective is identifying liver tissue specific biomarkers by assessing functional mRNAs and lncRNAs to assess radiation exposure after mass-casualty incidents could provide a valuable tool in developing and implementing effective and timely medical countermeasures.*

### 3.0 SCOPE

1. Gryphon will use the sets of sequencing data to identify differentially expressed mRNAs, long non-coding RNAs and microRNAs between three radiation-injury responses: 1 Gy, 4 Gy, and 10Gy doses.
2. This analysis will involve the development of linear models to evaluate differential expression between the different dose groups over 3 times points (6-hour, 24 hours, and 72 hours) using data from multiple biological replicates
3. This work will involve cleaning and normalizing either the FPKM or read count data. If read counts are not available, the FPKM values will be log transformed and then a standard linear modeling approach to evaluate differential expression will be used with time and dose as the batch and treatment variables, respectively.
4. Radiation Oncology Branch representative will provide raw data files from sequencing experiment for the analysis

### 4.0. CONTRACT REQUIREMENTS/ AND PERSONNEL QUALIFICATIONS

The Contractor shall provide our laboratory with data cleaning services, and sophisticated data analysis services, including classifier development and population of our decision tree. Gryphon staff bring an unusual depth of expertise in the physical and life sciences. Their basic science perspective is complemented by skills in qualitative and quantitative analytics as well as strong communication and research management skills.

**The Contractor shall perform the following tasks:**

A proper invoice is an "Original" which must include the items listed in subdivisions 1 through 12, below, in addition to the requirements of FAR 32.9. If the invoice does not comply with these requirements, the Contractor will be notified of the defect within 7 days after the date the designated billing office received the invoice (3 days for meat, meat food products, or fish, and 5 days for perishable agricultural commodities, dairy products, edible fats or oils) with a statement of the reasons why it is not a proper invoice. (See exceptions under II., below.) Untimely notification will be taken into account in the computation of any interest penalty owed the Contractor.
