Subject: NCI Bid Board Posting – service contract for a QX200 Droplet Digital PCR System

Among the defining concepts of the Genetics Branch is one that underlies its basic research focus and others that form the foundation of its clinical and translational research activities. The concept that underlies basic research is that cancer is a genetic disease caused by genetic instability. That instability is a function of all the inherited and acquired effects that mediate plasticity and alterability at the level of DNA. The success of molecular genetics over the past two decades has been the identification of genes involved in pathways of growth and development, and the identification of the mechanisms by which the normal regulation and/or products of these genes are altered in cancer. The elucidation of the necessary and sufficient factors that govern genetic instability, the description of the common and disparate themes among different types of instability, and the cataloging of distinct patterns of gene expression in tumors compared to the normal tissues from which they arise are within the purview and distinct perspective of this branch. There is, in addition, a clinical/translational mantle that this branch is called upon to shoulder.

At the clinical level this includes patient cancer risk screening, education, counseling, genetic testing (for those who choose to be tested, with testing provided in a setting that is attentive to all the ethical and legal aspects of the testing decision), and the development of appropriate surveillance and prevention options that take into account the category of risk that an individual patient, family, or population represents.

The service agreement for the QX200 ddPCR System is needed to provide services to NCI investigators that require absolute quantification of target DNA or RNA molecules for EvaGreen or probe-based digital PCR applications. The Biorad instruments are complex and sensitive and are used to generate valuable analytical data. The service agreement will provide valid calibration and ensure proper and safe operation.

The National Cancer Institute plans to purchase a service contract for the QX200 Droplet Digital PCR System from Bio-Rad Laboratories, Inc, Hercules, CA to perform this work. This is not a request for competitive quotation. However, if any interested party believes it can meet the attached requirements, it may submit a statement of capabilities. The capability statement must be in writing and must contain information and material in sufficient detail to allow NCI to determine if the party can fully meet this requirement. The capability statement must be received in the contracting office by 11:30 AM on August 19, 2022 ET. A determination by the Government not to compete this requirement based upon responses to this notice is solely

within the discretion of the Government. Information received will be considered solely for the purpose of determining whether to conduct a competitive procurement.

Sole Source Justification:

BioRad is the only source that can perform the work and provide maintenance service, trained technicians, and genuine parts for repair and support for the BioRad instrument we have in the lab.
